

DATA SHEET

SKY GARDEN ALUMINIUM EDGE AE100

Version 1.0

SKY GARDEN ALUMINIUM EDGE

An attractive, contemporary alternative to purpose built, rendered lead or aluminium capped parapets. For use on exposed system edges and as separation between vegetation and riverstone to maintain the integrity of the green roof system during aeolian or storm events. Can be loosely laid and ballasted in place, but recommended to be glued in place. Adhesive is available from Sky Garden Ltd, however we recommend that any adhesive used is checked with the waterproof membrane manufacturer before use. The aluminium edging is lightweight, robust and can be cut to length, slots cut into edging for drainage requirements.
